A black and white illustration of a toothbrush is positioned at the bottom of the schedule. To the right of the schedule are two dice: one white with blue pips and one white with red pips.

It's Time To Take Care Of Your Teeth

It's Time To Take Care Of Your Teeth

Directions:

Run off template. Students play with a partner. Children take turns rolling 1st one dice for number times 1-6. i.e. if they roll a 1, they put that number on their clock. Once they have filled in those times, they get to play with 2 dice. They then add the dice together to get numbers 7-12. The 1st child to fill in their tooth time clock, or the one with the most numbers filled in before the timer rings, is the winner.

Make a tooth time clock.

Have students cut out their clock circle and glue it to a paper plate, then poke a hole in the center of the clock. Add construction paper hands, or a large and short paperclip attached by a brass brad.

To whole-group assess analog time, call on students to call out a time. Children manipulate the hands to show the correct time. When they have positioned the hands, they hold up their clocks. Continue, 'til all of the times have been called.

Tooth Time Spinners

Run off, laminate, cut out.
Poke hole in center, insert brad and
paperclip to make a spinner.

Students take turns spinning the tooth spinner. Whatever number they spin, they write in the digital time on their toothbrush. The 1st student to complete their toothbrush or the one with the most times filled in when the timer rings, is the winner.
