

Band-Aide Alphabet Booklet With An Alphabetical Body Boo Boo Review

©TeachWithMe.com

This Alphabet Booklet is the perfect companion for the Owie Booklet. Here are some things you can do with it:

- Make the booklet for yourself to read to the class, or individual booklets for each student to read, trace and write.
- Print off the booklet, cut off the printing and make the letters into 5x5 color cards. Laminate them and use them as flashcards.
- Use them as an accompaniment for both books.
- Pass a card to each one of your students and give them 2 minutes to get into alphabetical order. See if they can name a part of their body beginning with that letter, or something from the booklet that they just read that began with that letter.
- Pass a card to each child and play *"I have, who has?"* to reinforce letter identification. i.e. *"I have the letter A; who has the letter B?"* The letter B child then says: *"I have the letter B; who has the letter C?"*
- Spill all the cards on the floor and have the child whose name begins with that letter go find it. (You can use first and last names, or a letter within a name if you need to.)
- Put the cards on the white board, buy several boxes of Band-Aides from The Dollar Store and let each student make the 1st letter of their name with Band-aides and then write in the rest of their name with a marker.
- They could illustrate a page on another sheet of paper by drawing a picture of themselves and where they got an owie that really hurt. Bind the book together and make a cover page entitled *Our Class Owie Book*.
